American Index Fund

Accumulation C GB00B80QG615

A sub-fund of **HSBC Index Tracker Investment Funds**, an open ended investment company ("OEIC"), managed by HSBC Global Asset Management (UK) Limited.

Objectives and investment policy

- ▶ To provide long term capital growth by matching the return of the S&P 500 Index.
- ▶ To invest in companies that make up the S&P 500 Index.
- ▶ The Index is made up of the 500 largest stock market listed companies in the United States of America, as defined by the index provider.
- ▶ The Fund will use a full replication strategy. This means that the Fund will normally invest in, or gain exposure to, all of the shares that make up the Index. It also means that the Fund will generally invest in shares in the same proportions as their weighting in the Index.
- ▶ The Fund can use borrowing and may also use a technique known as efficient portfolio management which aims to reduce risk or cost to the Fund in circumstances where this is likely to be of benefit.
- ▶ Income is rolled up into the value of your investment.
- ▶ You may sell your investment on any business day by contacting the administrator before the dealing deadline.
- ▶ Recommendation: this fund may not be appropriate for investors who plan to withdraw their money within a period of at least 5 years.

More about this rating

The rating is based on price volatility over the last five years, and is an indicator of absolute risk. Historical data may not be a reliable indication for the future. The value of an investment, and any income from it, may fall as well as rise, and you may not get back the amount you originally invested. The rating is not guaranteed to remain unchanged and the categorisation may shift over time. The lowest rating does not mean a risk-free investment.

Why is this fund in category 5?

Equity prices tend to fluctuate more than other asset classes as investors directly participate in underlying companies and their earnings.

Material risks not adequately captured by the risk rating above

- ▶ **Exchange rate risk** Investing in assets denominated in a currency other than that of the investor's own currency perspective exposes the value of the investment to exchange rate fluctuations.
- ▶ **Derivative risk** The value of derivative contracts is dependent upon the performance of an underlying asset. A small movement in the value of the underlying can cause a large movement in the value of the derivative. Unlike exchange traded derivatives, over-the-counter (OTC) derivatives have credit risk associated with the counterparty or institution facilitating the trade.
- ▶ **Index Tracking risk** The performance of the Fund may not match the performance of the index it tracks because of fees and expenses, market opening times and regulatory constraints.
- ▶ **Operational risk** The main risks are related to systems and process failures. Investment processes are overseen by independent risk functions which are subject to independent audit and supervised by regulators.
